SKIN-PRISM Follow-up: NBX-303 at Week 36

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-TO-021
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic open-label extension
Parent study	SKIN-PRISM
Investigational product	NBX-303 (fictional)
Report date	2026-10-20

Scope

This fictional extension enrolled 108 selected completers of the SKIN-PRISM study. All extension participants received NBX-303; there was no concurrent placebo arm. Data and participants are invented.

Follow-up result

At week 36, the reported PASI 75 response result was 58%. Changes refer to the original baseline; response proportions refer to the follow-up visit. This result belongs to the selected extension cohort, not the original randomized population.

Safety follow-up

Four participants discontinued because of adverse events and two were lost to follow-up. No new safety category was identified in this small fictional cohort; that observation does not establish long-term safety.

Comparison limits

The parent trial and extension differ in follow-up duration and participant selection. The extension cannot support a new placebo-adjusted treatment difference. Use the separate SKIN-PRISM randomized report for the original comparator results.

Missing information

This report provides no pediatric dosing, approval status, pregnancy data or individualized treatment instructions. All findings are demonstration data, not clinical guidance.

Summary table

Follow-up measure	Result
Week	36
Selected participants	108
PASI 75 response	58%
