SLEEP-HARBOR Follow-up: NBX-606 at Week 24

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-TO-024
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic open-label extension
Parent study	SLEEP-HARBOR
Investigational product	NBX-606 (fictional)
Report date	2026-10-20

Scope

This fictional extension enrolled 88 selected completers of the SLEEP-HARBOR study. All extension participants received NBX-606; there was no concurrent placebo arm. Data and participants are invented.

Follow-up result

At week 24, the reported sleep-onset latency result was -18 minutes. Changes refer to the original baseline; response proportions refer to the follow-up visit. This result belongs to the selected extension cohort, not the original randomized population.

Safety follow-up

Four participants discontinued because of adverse events and two were lost to follow-up. No new safety category was identified in this small fictional cohort; that observation does not establish long-term safety.

Comparison limits

The parent trial and extension differ in follow-up duration and participant selection. The extension cannot support a new placebo-adjusted treatment difference. Use the separate SLEEP-HARBOR randomized report for the original comparator results.

Missing information

This report provides no pediatric dosing, approval status, pregnancy data or individualized treatment instructions. All findings are demonstration data, not clinical guidance.

Summary table

Follow-up measure	Result
Week	24
Selected participants	88
sleep-onset latency	-18 minutes
