SKIN-PRISM: NBX-303 in Adults with Plaque Psoriasis

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-CT-015
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic randomized trial summary
Study identifier	SKIN-PRISM
Investigational product	NBX-303 (fictional)
Report date	2026-06-15

Purpose

This fictional study evaluated NBX-303 for plaque psoriasis. All participants, sites, outcomes and numbers are invented demonstration data. The report is intended for testing retrieval and citations, not clinical use.

Cohort and methods

280 adults aged 18 to 75 were randomized equally to NBX-303 or placebo. Treatment lasted 12 weeks. The primary endpoint was pasi 75 response from baseline, except response proportions which were measured at the endpoint visit. Outcome assessors were blinded.

Primary result

At week 12, pasi 75 response was 64% with NBX-303 and 22% with placebo. These values are the prespecified primary analysis of the randomized population. No pediatric results were collected.

Safety

Injection-site reactions occurred in 9.3% versus 2.1%; discontinuation due to adverse events was 2.9% versus 1.4%.

Interpretation and limits

The results describe this synthetic 12-week adult study only. Long-term effects, pregnancy outcomes, approved dosing and outcomes in children are not established by this document. No treatment or prescribing recommendation is made.

Summary table

Outcome	NBX-303	Placebo
PASI 75 response	64%	22%
Participants	140	140
