HEADWAY-MIGRAINE: NBX-404 in Adults with Episodic Migraine

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-CT-016
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic randomized trial summary
Study identifier	HEADWAY-MIGRAINE
Investigational product	NBX-404 (fictional)
Report date	2026-06-15

Purpose

This fictional study evaluated NBX-404 for episodic migraine. All participants, sites, outcomes and numbers are invented demonstration data. The report is intended for testing retrieval and citations, not clinical use.

Cohort and methods

260 adults aged 18 to 75 were randomized equally to NBX-404 or placebo. Treatment lasted 12 weeks. The primary endpoint was monthly migraine-day change from baseline, except response proportions which were measured at the endpoint visit. Outcome assessors were blinded.

Primary result

At week 12, monthly migraine-day change was -3.6 days with NBX-404 and -1.4 days with placebo. These values are the prespecified primary analysis of the randomized population. No pediatric results were collected.

Safety

Fatigue occurred in 7.7% versus 3.8%; discontinuation due to adverse events was 2.3% versus 1.5%.

Interpretation and limits

The results describe this synthetic 12-week adult study only. Long-term effects, pregnancy outcomes, approved dosing and outcomes in children are not established by this document. No treatment or prescribing recommendation is made.

Summary table

Outcome	NBX-404	Placebo
Monthly migraine-day change	-3.6 days	-1.4 days
Participants	130	130
