AIR-POLLEN: NBX-505 in Adults with Seasonal Allergic Rhinitis

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-CT-017
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic randomized trial summary
Study identifier	AIR-POLLEN
Investigational product	NBX-505 (fictional)
Report date	2026-06-15

Purpose

This fictional study evaluated NBX-505 for seasonal allergic rhinitis. All participants, sites, outcomes and numbers are invented demonstration data. The report is intended for testing retrieval and citations, not clinical use.

Cohort and methods

200 adults aged 18 to 75 were randomized equally to NBX-505 or placebo. Treatment lasted 6 weeks. The primary endpoint was total nasal symptom score change from baseline, except response proportions which were measured at the endpoint visit. Outcome assessors were blinded.

Primary result

At week 6, total nasal symptom score change was -4.8 points with NBX-505 and -2.3 points with placebo. These values are the prespecified primary analysis of the randomized population. No pediatric results were collected.

Safety

Dry mouth occurred in 5.0% versus 2.0%; discontinuation due to adverse events was 1.0% in both arms.

Interpretation and limits

The results describe this synthetic 6-week adult study only. Long-term effects, pregnancy outcomes, approved dosing and outcomes in children are not established by this document. No treatment or prescribing recommendation is made.

Summary table

Outcome	NBX-505	Placebo
Total nasal symptom score change	-4.8 points	-2.3 points
Participants	100	100
