SLEEP-HARBOR: NBX-606 in Adults with Chronic Insomnia

SYNTHETIC DEMONSTRATION DATA. This document is fictional and was generated for testing a document retrieval system. It contains no real patient information and does not report genuine research findings. Do not use it for clinical decisions.

Document ID	MDA-CT-018
Sponsor	Northbridge Clinical Research Unit (fictional)
Document type	Synthetic randomized trial summary
Study identifier	SLEEP-HARBOR
Investigational product	NBX-606 (fictional)
Report date	2026-06-15

Purpose

This fictional study evaluated NBX-606 for chronic insomnia. All participants, sites, outcomes and numbers are invented demonstration data. The report is intended for testing retrieval and citations, not clinical use.

Cohort and methods

220 adults aged 18 to 75 were randomized equally to NBX-606 or placebo. Treatment lasted 8 weeks. The primary endpoint was sleep-onset latency change from baseline, except response proportions which were measured at the endpoint visit. Outcome assessors were blinded.

Primary result

At week 8, sleep-onset latency change was -21 minutes with NBX-606 and -9 minutes with placebo. These values are the prespecified primary analysis of the randomized population. No pediatric results were collected.

Safety

Morning somnolence occurred in 10.0% versus 3.6%; discontinuation due to adverse events was 3.6% versus 1.8%.

Interpretation and limits

The results describe this synthetic 8-week adult study only. Long-term effects, pregnancy outcomes, approved dosing and outcomes in children are not established by this document. No treatment or prescribing recommendation is made.

Summary table

Outcome	NBX-606	Placebo
Sleep-onset latency change	-21 minutes	-9 minutes
Participants	110	110
